Experience

Staff AI Engineer - Agentic Workflows

New York

Apple

2026–Current

- Led a team of 4 building a closed loop agentic workflow for automating bug triage, fixing and validation.
 - Designed the harness in a custom pydantic orchestrator for output validation and session interruption recovery.
 - Deployed to internal workflow runner, with lambdas firing when tickets are created or updated.
 - Initiated and handed off the benchmarking framework with safeguards to prevent cheating.
 - Achieved best in class accuracy of 86% compared to 62% for the next-best internal tool.
-

Staff Software Engineer - Siri

New York

Apple

2025–2026

- Owned and shipped the architecture powering the new generation of media experiences on Siri AI.
 - Designed the data model, toolbox and foundational APIs for querying massive media app catalogs.
 - Defined the data ingestion pipeline for context enrichment with now playing information.
 - Spearheaded the backwards compatibility efforts for supporting apps using the old SiriKit APIs.
 - Aligned 10+ cross functional teams including modeling and search on the architecture, timeline and responsibilities.
 - Defined the online and offline evaluation strategies across simulations, on-device automation, and metrics.
-

Senior Software Engineer - Siri

Cupertino

Apple

2018–2025

- Led and shipped personalized app prediction for every user in the home on Apple's smart speaker, HomePod.
 - Drove a key HomePod feature expanding playback from 8 to 100+ third-party apps by streaming from user devices.
 - Shipped a major smart home feature allowing cross-device media controls for devices on the same network.
 - Key contributor to Apple Music Voice Plan, designing the upsell flow, onboarding experience, and metrics.
 - Created an internal log analysis tool with an Express backend, React frontend, and lambda workers. deployed over Kubernetes, saving tens of thousands of engineering hours across Siri, HomeKit, and Communications teams.
-

Front-End Web Developer

Montreal

Schulich School of Music

2017

- Developed an open-source browser-based annotation tool enabling document labeling for image segmentation tasks.
 - Added productivity features that reduced labeling time by 40% and published 2 papers.
-

Software Engineering Intern

Montreal

Canadian Aviation Electronics

Summer 2016

- Integrated Garmin avionics OEM software packages into CAE's virtual simulators for Embraer Phenom aircraft.
 - Diagnosed and debugged simulator issues using tools like Wireshark to trace HSDB packet flows.
-

Education

Canada

McGill University

2013–2018

B.Eng Computer Engineering

Skills

Languages: English, Arabic, French, Spanish

Coding: Swift, Python, Java, C, JavaScript, SQL

Tools: Kubernetes, Docker, Apache Superset, Splunk
